BONEFOLDER

Gwaith Powdwr 2012

“COOKE'S”

“Moulding in one’s hand
with the utmost care
what is not the void.”

Klaus-Dieter Wirth

“We propose that birds evolved from predators that specialized in ambush from elevated sites, using their raptorial hindlimbs in a leaping attack. Drag-based, and later lift-based, mechanisms evolved under selection for improved control of body position and locomotion during the aerial part of the attack. Selection for enhanced lift-based control led to improved lift coefficients, incidentally turning a pounce into a swoop as lift production increased. Selection for greater swooping range would finally lead to the origin of true flight.”

Y ddeufys na oddefwch—ond mewn llaw
Dwym, yn llon gafaelwch;
Llaw cyfaill yw hi—cofiwch
Ysgwyd llaw nes codi llwch

– Gwilym Deudraeth
